

## Installation Guide

### 1 Unpacking

Unpack the items. Your package should include:

- One EX73900 Series hardened managed switch
- One CD containing this user's guide

If items are missing or damaged, notify your EtherWAN representative. If possible, save the carton and packing material in case you need to ship or store the switch in the future.

### 2 What Else You Need

- Category 5 or better cable for RJ-45 ports
- Appropriate SFP cable for SFP ports
- Personal computer with a DB9 straight cable (if switch is to be managed through console port)

### 3 Select a Location

- Installations: Desktop, Wall-mount, DIN-Rail mount.
- Identify a power source within 6 feet (1.8 meters).
- Choose a dry area with ambient temperature between -40 and 75°C (-40 and 167°F).
- Be sure there is adequate airflow.

### 4 Connect to the Data Ports

Depending on the model, your switch can have the following ports:

- 12 10/100/1000BASE-TX ports
- 4 Gigabit SFP slots

#### 10/100/1000BASE-TX Ports

Ports 1 to 12 are gigabit copper ports and can be connected to routers, other switches, or end devices. Use category 5e or higher UTP/STP cable.

#### 1 Gbps SFP Ports

Your switch model has four 1 Gbps SFP slots. SFP transceivers can be installed directly into ports 13 - 16. Ensure that the same type of transceiver is used at both ends of the link and that the correct type of fiber cable is used.

### 5 Apply Power

The switch has two pairs of power inputs:

- A 12-48VDC terminal block

Redundant power supply is supported. However, only one power input is required to operate the switch.

#### Terminal Block

The switch provides two power inputs on a 12-48VDC terminal block. Only one power input is required to operate the switch. The terminal block has 5 terminal posts.

Pin		Description
Power 1	+	12-48VDC
	-	Power Ground
Power 2	+	12-48VDC
	-	Power Ground
		Earth Ground
Relay Output Rating		1A @ 250VAC

### Relay Output Alarm

The switch provides relay output contacts for signaling of a user-defined power or port failure. The relay output can be connected to an alarm signaling device. Current is 1A at 250VAC.

### Power-Up Sequence

When the switch is powered up:

- All Link/ACT LEDs blink momentarily.
- The Power 1, 2 LEDs light up and stay lit.
- LEDs for every port connected to a device will flash, as the switch conducts a brief Power On Self-Test (POST).

### 6 Console Configuration

- Connect to the switch console by connecting the DB9 cable to the console port of the switch and to the serial port of the computer running a terminal emulation application (such as Hyperterminal or Putty).
- Configuration settings of the terminal-emulation program: Baud rate: 115,200bps, Data bits: 8, Parity: none, Stop bit: 1, Flow control: none.
- The default login name is "root," no password.

### 7 Web Configuration

- Log in to the switch by launching a web browser and entering 192.168.1.10 in the address bar.

- Enter the default login ID: root (no password) and click "Login." The system information screen will display as shown below.
