

Firmware Upgrade Guide

EtherWAN Managed Switch | Firmware Migration

UPGRADE REQUIREMENT

Devices running v3.01.0.4-4 or earlier must install the Upgrade Activation Tool (EG97000_v6.UAT) before upgrading to v6.03.0.1 or later firmware.

Once the device is running v6.03.0.1 or later, subsequent firmware upgrades can follow the standard firmware upgrade process without the UAT.

Upgrade Path

UAT DOWNLOAD

[Download UAT Package](#)

Navigation path:

Member login > Certifications > Product Series > Software Tools > UAT Package

PRESERVED DATA

- Configuration settings
- User accounts
- System and event logs
- Operational settings

No factory reset is required.

Version Check

Current Firmware	UAT Required	Upgrade Path
V3.01.0.4-4 or earlier	Yes	UAT > Reboot > v6.03.0.1 or later > Reboot
V6.03.0.1 or later	No	Upgrade directly to the supported target firmware
